

GXS TrustedLink® for i

Product Overview

The leading data transformation software for IBM i

GXS TrustedLink for i (TLi) is the leading data transformation software for the IBM i platform.

TLi simplifies your trading partner communications by converting internal application data formats to and from Electronic Data Interchange (EDI) formats or other formats (XML, flat file and CSV) and executing the translation processing between you and your business partners.

Ease of Use

TLi's Visual Mapper provides an intuitive interface where you can define mapping for standard business documents in the formats you require. With unsurpassed ease of use, the Visual Mapper ensures faster trading partner deployment and helps you deal with complex data mapping requirements. Additional functionality in the Visual Mapper allows you to exchange XML, flat file, and CSV type documents.

Data Management

Designed especially for the IBM® i platforms, TLi optimizes the platforms' efficiency and architecture to support enterprise-level volumes of data. TLi's advanced archiving options speed transaction processing by moving historical data to the online Archive Center or offline archive storage.

KEY BENEFITS

- Faster trading partner deployment
- Faster mapping using the Visual Mapper tool
- Advanced archiving options speed transaction processing
- Improve efficiencies and visibility with a single point of control
- Easily and securely communicates across multiple environments

The IBM logo and the Business Partner emblem are trademarks of International Business Machines Corporation in the United States, other countries, or both. The letters "IBM" are also a registered trademark and are often used to identify the corporation and its offerings.

Customer Satisfaction and Value

TLi is one of the best values in the e-commerce market. When you consider the total costs of ownership, including hardware acquisition and maintenance, software licenses and support, personnel and facilities expenses, TLi is a very cost competitive solution.

With TLi, you get access to GXS Customer Support to handle general product questions, error resolution and software updates, including 24x7 support for production down issues. You can log support cases online through our Customer Self-Service Website and access our knowledge base and FAQs.

Visibility

TLi's Transaction Center offers a powerful document management area to access, view and track inbound and outbound documents. This single point of control of transactions allows you to administer and monitor all aspects of your trading environment, including acknowledgments, audit trails and reports. Transactions can be easily found or grouped by data contained within the document.

Performance

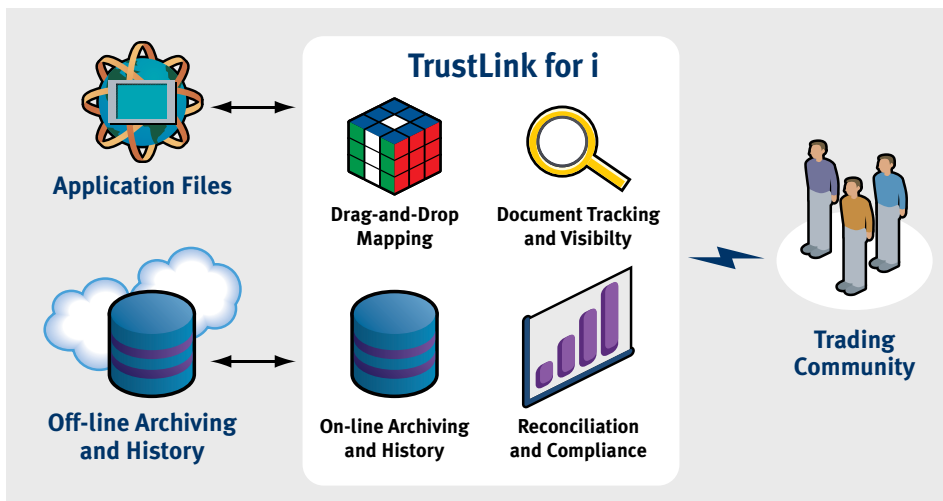

TLi supports a large, multinational organization with thousands of trading partners as well as a small company just starting an EDI program. No matter what communication and security capability you're seeking, TLi is the best solution to meet your needs. TLi easily and securely communicates via a Value-Added Network, FTP, or over the Internet.

Leading the Way

For over 20 years, GXS has helped businesses using the IBM® i platform build electronic trading communities that drive down the costs of business operations and improve customer service.

With over three times the customer base of our nearest competitor, TrustedLink for i is the recognized leader for data transformation solutions on the IBM i platform.

Designed and optimized specifically for the IBM i platform, including IBM's newest line of Power machines, TLi maximizes the platform's efficiency and architecture to ensure you receive optimal performance.

TLi converts your internal application data formats to and from data formats that your trading partners require. Translation processing can be automated and customized to handle your business needs. TLi supports native communication protocols on the i OS, including FTP and HTTPS connectivity to the Inoivisworks VAN. It also integrates with BizManager for AS2 communications.

TrustedLink for i Features

Visual Mapper

- Powerful tool for mapping and routing data to/from internal application files
- Maps directly to and from DB2 physical or logical files
- Drag-and-drop capabilities
- Easy-to-understand data mapping

Advantages

- Reduce custom integration costs
- Increase speed of implementing new transaction sets
- Easy implementation process with new trading partners

Transaction Center

- Day-to-day transaction management capabilities
- Retranslate and resend
- Move data to application files
- View, subset, control, and audit all transactions
- Descriptive EDI offers a readable version of a standard EDI document
- Identification of transactions with user-defined information from the document, such as purchase order number

Advantages

- Improve efficiencies and visibility with single point of control
- Expedite exception processing with intervention capabilities

Purge and Archive Center

- Obsolete Data Purge clears aged data from TLi without interrupting production
- Online Archive allows you to search, view, and print purged information as needed
- Offline Archive allows transactions to be stored on media and kept offline

Advantages

- Online Archive: information is readily available in three levels so that transaction summary, detail and data can be searched, viewed or printed
- Offline Archive: information is easily restored to the online Archive Center, can be stored indefinitely and the amount of disk space required is minimized
